

All four campuses have now approved the modified version of the interactive statistics program. The ultimate authority on this program rests with the four department chairs. The appointment of the coordinator should be the responsibility of the chairs at Illinois, Minnesota, Ohio State and Wisconsin.

The program coordinator will work with the participating faculty on the four campuses to work out offerings, and will report on their behalf to the four chairs, who oversee the total set of departmental offerings. We recommend that the term of coordinator run from January to January and be appointed annually. We also recommend that the four department chairs, or their designees, review the program after two full years of operation.

The coordinator is to be compensated with a one-ninth summer appointment, or with a course release, whichever she/he prefers. And, she/he will need miscellaneous funds for a pizza dinner at MPSA, instructor travel, etc. Each institution will provide \$5000 for these purposes annually for the next three years. In addition to the \$5,000, each campus is to provide its transmission costs and any course development support their faculty may need.
